INDEX.

Adie, A., Esq., his meteorological table, 421.

Agassiz, Professor, his account of Brazilian fossil fishes, 82,— notice of the publications of, 216.

Apjohn, Dr, on the composition of pyrope, 445.

Atkinson, Joseph, Esq., his meteorological table, 426.

Barnston, John, Esq., his observations on the progress of the seasons as affecting animals and vegetables, at Martin's Falls, Albany River, Hudson's Bay, 252.

Berghaus, on the epochs of vegetation, 182.

Bischof, Gustav, Professor, on the chemical theory of volcanos, 14.

——— Gustav, Professor, his physical and chemical examination of three inflammable gases which are evolved in coal-mines, 127.

——— on the employment of the safety-lamp in the coal-mines of Germany, 378.

Blumenbach, the late Professor, memoir of the life and writings of, by Professor Marx, 221.

Boué, Dr, his researches in geography, natural history, &c. in European Turkey, 409.

British Association, 451.

Buckland, Dr, on the agency of animalcules in the formation of limestone, 441.

———— his address to the Geological Society on 21st February 1840, 57.

———— his observations on the former existence of Glaciers in Britain, 194 and 202.

Camera Lucida, notice of a cheap, by Sir John Robison, 402.

Carbon and nitrogen, speculations as to the primary sources of the, present in plants and animals, by Charles Daubeny, M.D., 360.

Chalk-formation, on the living representatives of the microscopic animals of the, by M. Ehrenberg, 396.

Coal, on the evaporative power of different kinds of, by Dr A. Fyfe, 256.

Crystallography, notice of Delafosse's memoir on, 280.

Congrès Scientifique de France, 452.

Cuvier, Frederic, M., historical eloge of, by M. Flourens, 1.

Davidson, Mr Thomas, his description of the process of Daguerreotype, 178.

Daubeny, Charles, M.D., his speculations on the primary source of carbon and nitrogen present in plants and animals, 360.
——— his lectures on agriculture noticed, 452.
Delafosse, notice of his memoir on crystallography, 280.
Dugongs, on fossil, 445.
Dunbar, Rev. Dr, his meteorological table, 424.

Earthquakes, recent, on the west coast of South America, account of, by Mathie Hamilton, Esq., 153.
Ehrenberg, M., on the forms assumed by uncrystallized mineral substances, 353.
——— on the living representatives of the microscopic animals of the chalk-formation, 396.

Flourens, M., his historical eloge of M. Frederic Cuvier. 1.
Forbes, Professor, his remarks on Dr Richardson's observations on solar radiation, 250.
——— Forbes, Edward, and John Goodsir, Esqs., on the natural history and anatomy of Thalassema and Echiurus, 369.
Fyfe, Dr A., on the evaporative power of different kinds of coal 256.

Galbraith, William, Esq. M.S.A., on trigonometrical surveying and levelling, and on a supposed local attraction at the Calton Hill, 326.
Galloway, Mr, his remarks on the present state of our knowledge relative to shooting-stars, and on the determination of differences of longitude from observations of those meteors, 386.
Gardner, George, Esq., his geological notes made during a journey into the interior of North Brazil, 75.
Gases, three inflammable, evolved in coal-mines, described by Professor Gustav Bischof of Bonn, 127.
Glaciers of Spitzbergen, observations on, by C. Martens, M.D., 160, 284.
Goodsir, John, Esq., M.W.S., on the structure of the short sunfish *(Orthagoriscus mola)*, 188.
——— and Edward Forbes, Esq., on the natural history of Thalassema and Echiurus, 369.
Graham, Dr, his description of new and rare plants, 206, 426.
Gray, Lord, his meteorological table, 422.

Hamilton, Mathie, Esq. on American earthquakes, 153.

India, on the tea-plantations of, 301.

Kater's experiment on thin bars, remarks on, by Edward Sang, Esq., 321.
Kilbrickenite, on, 444.

Lemmings, on the migrations of, by M. Martins, 448.
Limestone, on the agency of animalcules in the formation of, by Dr Buckland, 441.
Long's American frame-bridge, notice relative to, by David Stevenson, civil-engineer, 297.
Lyell, Charles, Esq., on the geological evidence of the former existence of glaciers in Forfarshire, 199.

Macpherson, Murdoch, Esq., register of the temperature of the atmosphere kept at Fort Simpson, North America, in the years 1837–8–9 and 1840, 124.
Marx, Professor K. F. H., his memoir of the life and writings of the late Professor Blumenbach, 221.
Martens, Dr C., his observations on the glaciers of Spitzbergen, compared with those of Switzerland and Norway, 160, 284.
Martins, M., on the migrations and manners of lemmings, 448.
Meikle, H. Esq., on the electricity and explosive force of steam, and on the economy of the hot-blast furnace, 55.
Meteorological Tables, Mr Adie's, 421.—Lord Grey's, 422.—Sir D. Milne's, 423.—Dr Dunbar's, 424.—Mr Atkinson's, 426.
Milne, Sir David, his meteorological table, 423.
Mineral substances, unerystallized, on the forms of, by M. Ehrenberg, 353.
Mohs, Sir Frederick, his summary of the most important geognostical phenomena, with which it is necessary to be acquainted in preliminary mining operations, 26.

New Publications, noticed, 452.

Orkney, fossil fishes of, noticed by Dr Traill, 215.

Patents, list of, 217, 452.
Pyrope, Dr Apjohn on the composition of, 445.

Railways, notice of a new signal light for, by Alan Stevenson, LL.B., 347.
Richardson, John, M.D., on the frozen soil of North America, 110.
——— on the cultivation of the cerealea in the high latitudes of North America, 123.
——— his observations on solar radiation, made at Fort Franklin, in the years 1825, 1826, and 1827, 240.
——— appendix to his observations on solar radiation, 419.
Robison, Sir John, his notice regarding a cheap camera lucida, 402.

Royal Society of Edinburgh, proceedings of, 209, 430.
Safety-lamp, on the employment of, in Germany, by Professor Gustav Bischof, 378.
Sang, Edward, Esq., on an erroneous deduction drawn by the late Captain Henry Kater, from his experiment on the flexure of thin bars, 321.
Scientific Intelligence, 215, 441.
Seasons, observations on the progress of, by G. Barnston, Esq. 252.
Soil, frozen, of America, observations on, 110.
Solar radiation, observations on, made at Fort Franklin, in the years 1825, 1826, and 1827, by Dr Richardson, 240.
———— appendix to Dr Richardson's observations on, 419.
Spitzbergen, glaciers of, described by Dr Martens, 160, 284.
Spring and river water, on, as connected with health and the arts, 307.
Stars, shooting, remarks on the present state of our knowledge relative to them, by Thomas Galloway, Esq. 386.
Stevenson, David, civil-engineer, his notice relative to Long's American frame-bridge, 297.
———— Alan, LL.B., his notice of a new signal-light for railways, 347.
Sun-fish, account of, by John Goodsir, Esq. 188.

Tea plantations of India, on the, 301.
Terra del Fuego, observations on, 404.
Thalassema and Echiurus, on the natural history and anatomy of, by E. Forbes, Esq. and John Goodsir, Esq., 369.
Toplis, John, B.D., on hydrostatic pressure, as a cause of earthquakes, 84.
Traill, Dr, on the fossil fishes of Orkney, 215.
Trigonometrical surveying and levelling, on, by William Galbraith, M.S.A., 326.
Turkey, European, Dr Boué's remarks on, 409.

Vegetation, epochs of, by M. H. Berghaus, 182.
Volcanos, chemical theory of, considered by Gustav Bischof of Bonn, 14.

Wernerian Natural History Society, proceedings of, 211, 439.
Whale-fishing in the Northern Seas, 451.
Wilson, C. H. Esq., on the state of the arts in Italy, &c., 90.

PRINTED BY NEILL & CO. OLD FISHMARKET, EDINBURGH.
